Firmamız 1978 yılında Erkan Teoman tarafından Bursa'da kurulmuş, 1994 yılında ALBATUR markasıyla şirket ünvanını almıştır. 2002 yılına dek farklı sektörlerde yatırımları bulunan şirketimiz, ikinci kuşak temsilcileri Can Teoman ve Kadir Batur Teoman'ın şirkete katılımlarıyla Sürgü Sistem çözümleri geliştirerek mobilya endüstrisine giriş yapmıştır.

Albatur, üretimini gerçekleştirdiği tüm ürünlerin Ar-Ge, Kalıp, Üretim ve Montaj operasyonlarını kendi tesislerinde gerçekleştirmektedir. Partnerlerimizden gelen talep ve görüşleri titizlikle değerlendirerek, sektöre daha kaliteli ürünler sunmak için ilk günkü özenle çalışmalarına devam etmektedir.

Tesisimiz Bursa Çalı Sanayi Bölgesinde, son teknoloji makine parkı ile 5.000 m² kapalı alanda faaliyet göstermektedir.

100'ün üzerindeki tescilli ürünümüz ile sektörümüze kaliteli ve akıllı detay çözümler sunuyoruz. Bu yıl itibari ile ihracatımızı 42 ülkeye çıkartarak, dünyanın farklı köşelerine Albatur markamızı ulaştırmanın gururunu sizlerle paylaşmaktan onur duyuyoruz.

Yenilikçi, pratik ve çözüm odaklı daha nice ürünleri sizlerin beğenisine sunmak dileği ile saygılarımızı sunuyoruz.

Our company was founded in Bursa in 1978 by Teoman Erkan. In 1994, company name has changed as ALBATUR A.S. In 2002 Representatives of the second generation Teoman Can and Teoman Kadir Batur joined the company. Thereafter it began producing Sliding Systems solutions and debuted in the furniture industry.

As a manufacturer company ALBATUR, has ability to produce all the product range starting from R&D, mold and installation. We consider carefully the views from our partners and work hard to offer better quality products.

Our factory has 5000 square meter in Bursa Cali Industrial Zone, and we are using latest technology machines in our factory.

More than 100 our registered products are prof it and We are exporting to 42 countries.

With the hope to meet up with new products and successes, we offer our respect to our customers and friends.

Наша компания была создана в Бурсе в 1978 году Теоман Эрканом, с 1994 получила название ALBATUR. До 2002 года компания развивалась в различных областях промышленности, но с приходом второго поколения Теоманов - Кадир Батура и Джана компания стала развиваться в направление систем раздвижных механизмов для мебели.

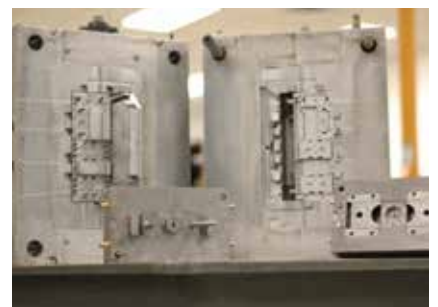

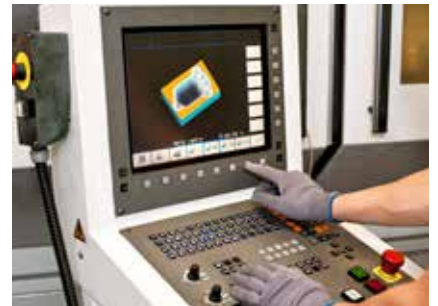

В Альбатур специальный отдел занимается исследованием и разработкой новых продуктов. Изготовление, монтаж - все осуществляется под одной крышей с использованием своих машин и технологий. Наша фабрика оснащенная новейшими технологиями располагает на 5000 м² в промшленной зоне Чалы города Бурса .

Спрос от наших партнеров и тщательная оценка обратной связи с первого дня работы компании по сегодняшний день поддерживает эффективность работы и высокое качество, выпускаемой продукции.

У нас более 100 патентов ,которые успешно используются в производстве. С этого года, наша продукция экспортируется в 42 страны. Мы с гордостью представляем наши товары в разных уголках мира и сочтем за честь поделиться продукцией ALBATUR с вами.

Нашей целью по-прежнему остаются инновационные, практичные и ориентированные на конкретные задачи продукты, отвечающие всем требованиям наших партнеров.

С Уважением ALBATUR

ALB 8888 SERIES

ALB 8200 SFT SERIES

Zerafet, sessizlik ve güvenliği bir arada buluşturan 8200 SFT serisi ile en şık tasarımlar sizlerin olacak...

The 8200 SFT series offering grace, silence and security will belong to you!

Элегантность, стильный дизайн с сочетанием тишины и безопасности все эти качества присущи серии 8200 SFT

Estetik görünüm sunar. Sağlıklı ve sessiz çalışır. Dışarıdan çalışması sayesinde dolap derinliğini maksimuma çıkarırsınız. Yavaşlatıcılar ray içerisinde gizlidir. Dolap içerisinde görünmez. Mekanizma üzerindeki kilit çenesi sayesinde, kapaklarınız raydan çıkmaz. Güvenli kullanım imkanı sunar. 18-50 mm farklı kalınlıklar için mekanizma alternatifleri bulunmaktadır. Farklı mekanizma açıklıkları sayesinde minimum kapak aralığı sunar. Üst ve alt rayda kullanılan yüksek kalite yavaşlatıcılar sayesinde ağır kapaklarda bile çift yöne sağlıklı frenleme imkanına sahip olursunuz.

Its advantages: It prevents esthetic views. It works reliably and silently. You can maximize depth of cabinet since it works at outside. Soft closers are hidden in rails, it is not seen in cabinet. Thanks to locking systems on mechanism, covers do not go off the rails. It offers to use safely. There are mechanism alternatives for varied thickness such as 18-50 mm. Thanks to its different mechanism openness, it offers minimum cover space. Due to high quality soft closers used on upper and lower rail, you have opportunity of two sided braking even in heavy soft closers.

Обеспечивает эстетичный внешний вид. Надежная и тихая работа. Благодаря тому, что система располагается снаружи, внутреннее пространство шкафа может быть использовано максимально. Стопоры скрыты внутри шкафа. Благодаря механизму блокировки, дверца не может сойти с рельсы, что обеспечивает безопасное использование. Вы можете подобрать альтернативные выпрямители для различных поверхностей толщиной от 18 до 50 мм. Обеспечивает минимальное расстояние между дверцами. Благодаря высокому качеству доводчиков, использующихся сверху и снизу, возможно использование двойной рельсы даже при наличии очень тяжелой двери.

SRG 100 SERIES

Hızlı ve pratik montajı sayesinde vazgeçilmeziniz olacak bir seri..

The series are essential for you because of its fast and practical montage.

Быстрый и практичный монтаж-от этого невозможно отказаться.

Kolay ve pratik montaj imkanı sunar. Ray içerisinde kanala sürülen yavaşlatıcılar, hem estetik görünüm hem de rahat ayar yapma imkanı verir. Dolap içi uygulanması sayesinde, zeminden tavana kadar uygulama imkanı verir. Profillerin parlak yüzey uygulaması, dolabınıza estetik katar. Yüksek kaliteli yavaşlatıcılar sayesinde, kapaklarınızın açılış ve kapanış yönünde sessiz ve yumuşak kapanmasını sağlar.

It presents easy and practical montage opportunity. Soft closers put into the rail provide not only esthetical views but also comfortable setting opportunity. Thanks to it can be applied inside the cabinet, it provides opportunity of practicing it from ground to ceiling. The application of shining surface profiles provides esthetical views to your cabinet. Thanks to high quality soft closers, it provides silent and safe closing.

Практичная и лёгкая установка. Наличие внутри рельсового канала доводчика, обеспечивает удобное использование и отвечает эстетическим требованиям. Благодаря расположению, обеспечивает размещению от пола до потолка. Глянцевая обработка поверхности профилей добавляет эстетичности шкафу. Высокое качество доводчика, обеспечивает тихое и плавное открытие и закрытие дверей вашего шкафа.

SRG 180 SERIES

Kolay ve pratik montaj imkanı sunar. Ürünler yalnızca vidalanarak uygulandığından, montaj esnasında dolabınızda ayrıca delik ve oyma işlemi yapmanıza gerek kalmaz. Ray içerisinde kanala sürülen yavaşlatıcılar, hem estetik görünüm hem de rahat ayar yapma imkanı verir. Üst ray içerisindeki çift yöne uygulanabilen yavaşlatıcılar sayesinde, kapaklarınızın açılış ve kapanış yönünde sessiz ve yumuşak kapanmasını sağlar. 16-50 mm aralığında ayarlanabilen mekanizma sayesinde farklı kalınlıklarda uygulama imkanı sunar.

It presents easy and practical montage and advantage. Since products are only applied by screwing, there is no need to drilling and carving operation during the montage. Soft closers put into the rail provide not only esthetical views but also comfortable setting opportunity. Thanks to two-sided soft closers applied in the upper rail, covers can be closed silently and softly. The mechanism adjusted by distance from 16 to 50 mm provides application of varied thickness.

Легкие и практичные возможности монтажа. Во время сборки также нет необходимости делать дополнительные отверстия. В рельсе располагается канал, где устанавливается доводчик, что дает удобную регулировку доводчика не нарушая внешний вид шкафа. Благодаря доводчикам с двойным направлением, расположенных на верхней рельсе, обеспечивается плавное и бесшумное открывание и закрывание шкафа. Регулируемые системы механизмов в диапазоне 16-50 мм, обеспечивают возможность применения на поверхностях различной толщины.

En dar alüminyum çerçeve profillerine dahi uygulanabilir. Mekanizma gövdesi zamak dökümdür. Rulmanlı teker sistemine sahiptir. Kullanım esnasından raydan çıkması için alt ve üst mekanizmarında rayın içerisine giren, güvenlik klavuzları bulunmaktadır. M4 Allien anahtar ile yükseklik ayarı yapılabilir.

It is applied to the narrowest aluminum framework profiles. Body of mechanism is 'zamak' cast. It has bearing wheel system. There is security guide entering into the rail at upper and lower mechanisms for not to go off the rail when you are using it. It can be done adjustment of height with M4 Alien Key.

Применимо даже в самых маленьких или узких размерах алюминиего профиля. Механизм из сплава цинка. Имеет колеса с подшипниками. Обеспечивает прохождение дверей по рельсам, препятствуя сходу сверху и снизу. Регулировка высоты ключом.

Neden ÇEK-GER kullanılmımalı ?

Hava şartları, rutubet, taşıma ve istifleme (depolama) nedeniyle MDF, suntalam ve ahşap kapak malzemelerde kalıcı burkulma ve atıklık oluşabilmektedir. Ayrıca ahşap üzerine eklenen cam, ayna ve diğer aksesuarlar kapağın düzlemselliğine etken faktörlerdir. Kapaklarımızda bu atıklığı gergi sistemleri ve yan duvarlarda kullanacağımız alüminyum dikme kulplar (dik düzlemde ahşabın düzlemselliğini sağlayabilecek kesit ve atık oluşabilecek eksende ahşabın mukavemetinden daha etkin dirençli alüminyum yada metal ekstrüde profil ve aksesuarlar) ile çözmek mümkündür. Lakin dikme kulplar ile çözüm üretim esnasında etkin olmasına karşın, depolama şartlarına bağlı olarak 1 yada 2 ay sonra açılan ambalajlı ürünlerde yetersiz kaldığı görülmektedir. Bu tip ürün gruplarında çekger mekanizmaları kapaktaki atıklıkları, kullanıldıkları eksen yönünde çözüme kavuşturmaktadır. En ölçüsü 40 cm e kadar olan kapaklarda merkezden bir adet, daha büyük en ölçülerinde iki adet çekger kullanımı önerilmektedir. Cam ve ayna yapıştırılan kapaklarda çekger kullanımında dikkat edilmesi gereken bazı hususlar: Cam, ayna v.s. grubu ahşap panele yapıştırılırken ahşap panel kesinlikle çok hassas ve düz bir zeminde tutulmalıdır. Aksi takdirde yapıştırılma anındaki tüm atıklık daha sonra çekger gergi yada kulp marifeti ile düzeltilemez bir durum oluşturmaktadır.

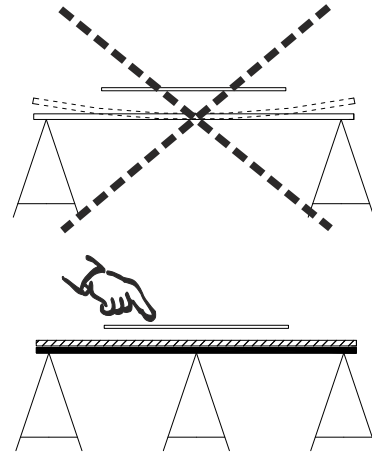

Why Pull-Tension ?

On the wooden door in materials, MDF materials and chipboard materials can be permanent strain and swelling. Because of bad weather condition, humidity, transport and storage factors. Also other factors effecting the flatness of the wooden covers; installing glass, mirror and other accessories on the wooden panel. Its possible to solve this swelling problem for using Pull & Tension Equipments and using the pillar aluminium handles on the side walls of the wooden panel. However its effective solution using the pillar aluminium handles during the production but it seems to be inadequate solution if the products keep in storage 1 or 2 months. In this type of products group, Pull & Tension mechanism resolve this swelling problem on the cover using the their axis direction side. Width measure to 40 cm covers, from the center of the cover 1 pcs Pull & Tension should be using, more larger width measure 2 pcs Pull & Tension recommended. Issues to be considered Pull & Tension when used glass and mirros on the cover: When use glass and mirros on the wooden cover panel; panel definitely should be keep on the very sensitive and flat ground. Otherwise during the installing glass or mirros, at this moment swelling that may occur unimprovable situation.

Для Чего Нужно Использовать ВЫПРЯМИТЕЛЬ ?

Погодные условия, влажность, транспортировка и длительное хранение, все эти факторы изменяют структуру, приводя к искривлению изделий из МДФ, ДСП и покровных материалов из дерева. Также добавление деревянных окон, зеркал и других аксессуаров изменяют форму изделия МДФ и ДСП. Эти проблемы возможно решить с помощью выпрямителя для фасадов. Использование краевого алюминиевого профиля может предотвратить искривление дверных полотен, но из-за условий хранения его эффективность, сравнивая с выпрямителями, ниже. Как правильно подобрать выпрямитель? Если ширина до 40 см — одного выпрямителя будет достаточно, если более 40 см то советуем использовать 2 выпрямителя. Внимание! Если вы решите использовать выпрямитель на искривленном фасаде с уже имеющимся зеркалом или стеклом, то эффекта не будет от выпрямителя, поэтому убедитесь, что фасад ровный и только потом клеите стекло или зеркало.

Cam, ayna v.s. grubu ahşap panele yapıştırılırken, panel kesinlikle çok hassas ve düz bir zeminde tutulmalıdır. Aksi takdirde yapıştırılma anındaki tüm atıklık, daha sonra çekger gergi yada kulp marifeti ile düzeltilemez bir durum oluşturur.

11 Farklı yavaşlatıcı alternatifi ile ürünlerinizde estetik, sessizlik ve güvenlik ön planda olacak...

With 11 different alternatives model, in your products will be aesthetics, quietness and safety.
11 различных видов доводчика, которые мы можем вам предложить, сделают ваш шкаф более эстетичным, бесшумным и надежным

7030 E

7010

8090 SFT

8040

Neden yavaşlatıcı kullanılmalı?

- Kapakların hızlı kapanmalarında oluşabilecek zararları önleyerek dolabınızın ömrünü uzatır.
- Sisteminizin sessiz şekilde kapanmasını sağlar.
- Çocuk ve yaşlıların el veya parmak sıkışmalarının önüne geçerek güvenli kullanım imkanı sağlar.
- Kapakların çalışmasına estetik katar.

Why stopper should be used?

- Prevent damage that may occur in the fast closing lid and extend the lifetime of your wardrobe.
- Silence allows the shutdown of your system.
- Children and the elderly prevent hand or finger jams. It provides safe use.
- Adds aesthetics to work for the cover.

Почему следует использовать доводчик?

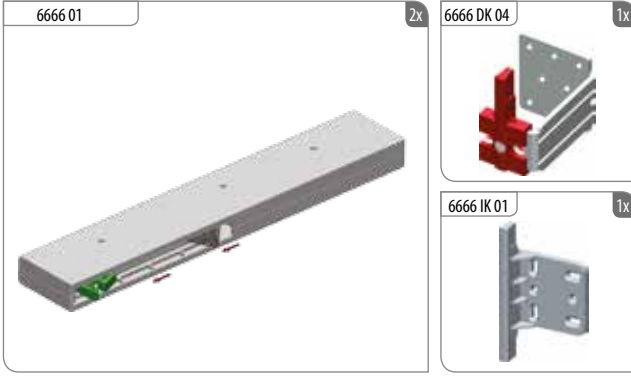

- Предотвращает повреждения возникающие в результате быстрого закрытия шкафа.
- Обеспечивает тихое закрытие.
- Безопасное использование, без травм для детей и пожилых людей.
- Улучшает внешний вид шкафа.

”

Kapıların hayatınızda kapladığı alanı ortadan kaldırmak için özel tasarım sürme kapı serileri **Albatur**'da . . .

To eliminate the space of doors in your life, special design of sliding door series at Albatur!
Для экономии пространства ALBATUR может предложить вам раздвижные двери.

50 Kg'dan 250 kg'a kadar farklı kullanım alanlarına uygun sürme kapı serileri.
Kapılar nedeniyle kaybedilen alanları minimuma indirmek için tasarlanmış sürme kapı sistemleri.
İster kapanış yönünde , isterseniz her iki yönde yavaşlatıcılı sürme kapı sistemleri
Senkronize çalışabilen, yavaşlatıcılı alternatifli sürme kapı sistemleri
Rulmanlı teker sistemleri sayesinde uzun ömürlü ve dayanıklıdır.
İç ve dış mekanlar için farklı detay çözümlerine uygun sistemlerdir.
Cam ve ahşap uygulama detaylarıyla işlevsel ve geniş kullanım alanı sunar.

Sliding door series are appropriate for different usage areas from 50 kg to 250 kg.
Sliding door systems are designed for minimizing losing area because of doors.
Sliding door systems with soft closing work at closing or two-sided directions.
Synchronized sliding door systems having alternative soft closers.
Thanks to the bearing wheel systems it is long-lasting and durable.
They are appropriate for different detail solutions at outside and inside areas.
It provides wide usage area with its vitreous and wooden application details.

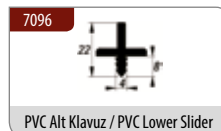

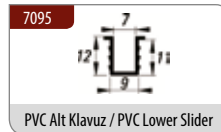

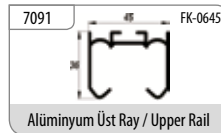

Подходит для дверей весом 50 кг - 250 кг.
Минимализирует площадь под раздвижные системы, увеличивая пространство для использования.
Доводчики используются как в направлении закрытия так и в обратном направлении.
Возможность синхронизации дверей. Также с использованием доводчиков.
Роликовая система обеспечивает надёжную работу в течение длительного времени.
Соответствующие системы различных деталей для внутренних и наружных пространств.
Наличие подходящих деталей из дерева и стекла расширяет спектр применения.
